## Therapeutics + Diagnostics

The possibility to perform diagnostic imaging and subsequently administer therapies by the means of the “**same molecule**”

# Radioiodine Therapy of Differentiated Thyroid Cancer

*“Effective therapy works”*

Lung metastases  
of differentiated  
thyroid carcinoma

before therapy

after therapy

## PSMA as target for PCa imaging and therapy

### Prostate-Specific Membrane Antigen

[syn. Glutamate carboxypeptidase II (GCP-II)]

- cell surface protein
- overexpression in >90% of PCa cells
- promising target for imaging and therapy
- development of various PSMA-ligands

# THERANOSTIC PAIRS

## Targeted Molecular Imaging and Therapy

WE TREAT WHAT WE SEE

SCHEMATIC REPRESENTATION OF A DRUG FOR IMAGING AND TARGETED THERAPY

### Targets

- Antigen  
e.g. CD20, HER2)
- GPCR e.g. SSTR
- Enzymes & inhibitors  
e.g. PSMA
- Transporters

### Molecular Address

- Antibodies, minibodies,  
Affibodies, SHALs, aptamers
- Regulatory peptides  
(agonists & antagonists)
- PSMA ligands
- Amino Acids

### Reporting Unit

- $^{99m}\text{Tc}$ ,  $^{111}\text{In}$
- $^{68}\text{Ga}$ ,  $^{18}\text{F}$

### Cytotoxic Unit

- $^{90}\text{Y}$ ,  $^{177}\text{Lu}$
- $^{225}\text{Ac}$ ,  $^{213}\text{Bi}$

# Local detection

# mpMRI for detection of PCa

# $^{68}\text{Ga}$ -PSMA PET/mpMRI for detection of PCa

## <sup>68</sup>Ga-PSMA PET/mpMRI for local detection

53 patients examined by preoperative <sup>68</sup>Ga-PSMA PET/mpMRI

Evaluation using PIRADS (mpMRI) or 5-point Likert-scale (PET)

Patient basis	Detection rate (95% CI)	p (to mpMRI)
mpMRI	66 (52-78)	
PET	92 (82-98)	<b>p&lt;0.001</b>
PET/mpMRI	98 (89-100)	<b>p&lt;0.001</b>

Sextant basis	Sens. (95% CI)	Spec. (95% CI)	AUC (95% CI)	p (to mpMRI)
mpMRI	43 (33-53)	98 (94-100)	0.73 (0.66-0.80)	
PET	64 (56-72)	94 (86-98)	0.83 (0.78-0.87)	<b>p=0.003</b>
PET/mpMRI	76 (68-82)	97 (90-99)	0.88 (0.84-0.92)	<b>p&lt;0.001</b>

## $^{68}\text{Ga}$ -PSMA-PET/MRI for fusion biopsy (CAMP/TUM)

- Enables fusion of MR, PET/MR to TRUS (optical tracking)
- Facilitates targeted biopsies of suspicious lesions
- Disadvantages: special equipment necessary, not commercial (yet)

Fusion biopsy system at MRIU/TUM, developed by Department of Computer Aided Medical Procedures, CAMP/TUM (Prof. Navab); Zettinig et al. IJCARS, 2015

## $^{68}\text{Ga}$ -PSMA-PET/MRI for planning of local therapy

→  $^{68}\text{Ga}$ -PSMA-PET helpful for planning of local boost radiation

Zamboglou et al., Radiother Oncol 2017

# Lymph nodes

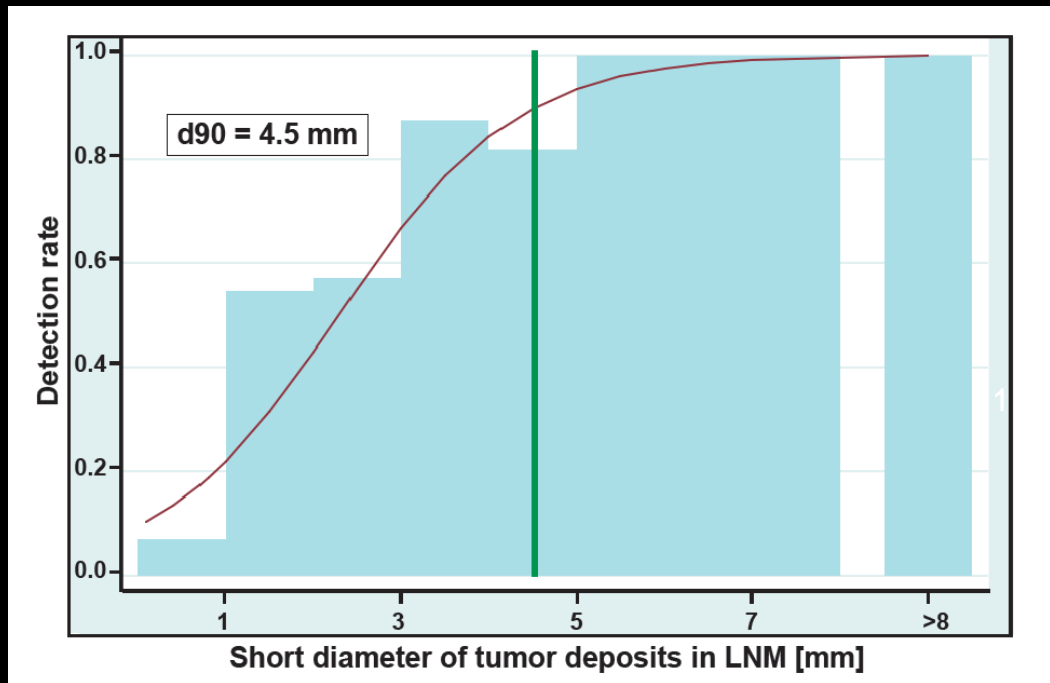

**METASTATIC PELVIC AND PERIRECTAL NODES**

## LN-Staging: <sup>68</sup>Ga-PSMA PET superior to CT/MRI

**Table 2.** LN detection in 130 patients and 734 templates

	Pt Histology LN Metastasis	Template Histology LN Metastasis
<i>Morphological</i>		
% Sensitivity	43.9	28.2
% Specificity	85.4	97.1
% Accuracy	72.3	86.1
% PPV	58.1	64.7
% NPV	76.8	87.7
<i>PSMA-PET</i>		
% Sensitivity	65.9	73.5
% Specificity	98.9	99.2
% Accuracy	88.5	95.1
% PPV	96.4	94.5
% NPV	86.3	95.2

## LN-Staging: $^{68}\text{Ga}$ -PSMA PET not perfect!

- Detection rate of metastatic LN lesions by  $^{68}\text{Ga}$ -PSMA PET requires certain size (50%/90% at short axis diameters of  $\geq 2.3\text{mm}/\geq 4.5\text{mm}$ )<sup>1-3</sup>
- CT/MRI: criterion for malignancy size  $>8-10\text{mm}$ <sup>4</sup>

## $^{177}\text{Lu}$ -PSMA-radioligand therapy (PRLT)

Theranostic PSMA-ligands for **endoradiotherapy** using  $^{177}\text{Lu}$

Benešová et al., JNM 2015

Weineisen et al, JNM 2015

Increasing number of retrospective case series , e.g. <sup>1 2 3 4</sup>

- 50% PSA decline in 30-60% of patients
- rare event of grade III/IV toxicities

<sup>1</sup> Ahmadzadehfar et al, Oncotarget 2016, <sup>2</sup>Kratochwil et al, JNM 2016, <sup>3</sup>Rahbar et al, JNM 2016, <sup>4</sup>Baum RP et al, JNM 2016

## <sup>177</sup>Lu-PSMA-radioligand therapy: safety

**Table 2.** Safety of <sup>177</sup>Lu-PSMA radioligand therapy in the literature.

Reference	n	Hematotoxicity CTCAE grade 3/4				Nonhematologic AE
		Hb (%)	WBC (%)	Plt (%)	Xerostomia	
Ahmadzadehfar et al. <sup>64</sup>	10	10	0	0	0	mild nausea, fatigue
Rahbar et al. <sup>66</sup>	28	11	0	0	14	mild nausea
Ahmadzadehfar et al. <sup>65</sup>	24	9	0	0	8.7	mild nausea
Baum et al. <sup>67</sup>	56	0	0	0	3.5	na
Kratochwil et al. <sup>72</sup>	30	3.3	0	3.3	6.7	mild nausea, fatigue
Rahbar et al. <sup>73</sup>	82	2.8	0	0	8.5	mild nausea
Heck et al. <sup>74</sup>	22	0	0	0	37	fatigue, appetite loss
Rahbar et al. <sup>69</sup>	145	10	3	4	8	mild nausea
Bräuer et al. <sup>75</sup>	59	18	3	3	25	nausea, fatigue

Abbreviations: CTCAE: common toxicity criteria of adverse events, Hb: haemoglobin, WBC: white blood cells, Plt: platelets.

# EANM procedure guidelines for radionuclide therapy with $^{177}\text{Lu}$ -labelled PSMA-ligands ( $^{177}\text{Lu}$ -PSMA-RLT)

## ■ Indications:

**Patients with metastatic, castration-resistant prostate cancers (mCRPC)** who have exhausted or are ineligible for approved alternative options and **with adequate uptake of PSMA ligands on the basis of a pre-therapy imaging study** can be considered for treatment.

■ Adequate uptake? A baseline  $^{68}\text{Ga}$ -PSMA-11 PET SUVmax at dominant sites of tumor involvement to be at least 1.5 times the SUVmean of liver. [Hofman MS et al. *Lancet Oncol.* 2018]

# (LuPSMA trial): a single-centre, single-arm, phase 2 study <sup>31</sup>

- mCRPC cases, progressive disease after standard Tx
- **57%** achieved a PSA decline of 50% or more; objective response by imaging in nodal or visceral disease was reported in **82%** of patients with measurable disease
- **Grade 1 dry mouth in 87% patients**, grade 1 or 2 transient nausea in 50%, and grade 1 or 2 fatigue in 50% of patients [4]. The most common toxic effects possibly related to <sup>177</sup>Lu-PSMA-617 were grade 3 lymphocytopenia in eleven (37%), **grade 3 anaemia in four (13%), and grade 3 or 4 thrombocytopenia in four (13%) patients**. In summary, data indicate a favorable safety profile for <sup>177</sup>Lu-PSMA RLT.
- Median PSA PFS and OS were 7.6 mo and 13.5 mo.

# Conclusion

- PSMA Theranostics: A paradigm of precision medicine in mCRPC - a visible lesion is a treatable lesion
- PSMA PET imaging: Gatekeeper for PSMA-directed-RLT of metastatic Pca; monitoring the effect of systemic treatment
- PSMA-directed-RLT: Favorable safety profile, xerostomia is a main concern; 50% achieved a PSA decline of 50% or more; OS benefit?
- 30% patients may undergo disease progression with Lu177-PSMA-RLT, Ac225-PSMA-RLT could be a surrogate – combination protocol may have better outcome
